

Users, Roles and Permissions in Zoho Creator

Aim

To study the process of managing users, defining roles, and configuring permissions in the Zoho Creator platform, and to understand how access control is implemented for different users within an application.

Procedure

1. Log in to the Zoho Creator platform.
2. Open the required application or create a new application.
3. Navigate to the Settings section and select User Permissions.
4. Add users to the application by providing their email address and name.
5. Assign appropriate roles to the users from the available roles list.
6. Create new roles based on the organizational hierarchy using the Roles tab.
7. Configure role details such as Role Name, Reports To (parent role), Share Data with Peers, and Description.
8. Create custom permissions using the Permissions tab.
9. Configure module-level permissions for each permission profile (Access, View, Edit, Delete).
10. Set API and Security Permission settings as required.
11. Assign permissions to roles and users.
12. Configure Data Sharing settings to define record visibility.
13. Save and verify the configuration by testing with different user accounts.
14. Publish the application after completing the user and permission setup

Help

Result

The experiment was completed successfully by studying user management, role definition, and permission configuration in Zoho Creator. The exercise demonstrated how users, roles, and permissions can be combined to implement a secure and structured access control system for a business application with reduced manual effort.
